Electrical Engineer

Main tasks

The E-Engineer is part of the Department of Technologies (R & D) and reports directly to the BU Manager Technologies. This position includes the following main tasks:

- Is responsible for the electrical and magnetic design of electric motors based on the customer's functional specifications.
- To study, analyze, evaluate and interpret technical specifications and drawings of both existing products and new developments.
- To determine whether requirements and drawings perform in relation to manufacturability, time, quality and through which production methods.
- Is involved in measurements on FUMO and prototypes, and analyzing the results.
- To manage and maintain contacts with external partners.
- To support manufacturing during the (pre-) production.
- Active participation in projects in which various internal disciplines are represented.
- To deliver and document design calculations and measurements.
- Electrical knowledge capture and transfer to employees.

Candidate profile

- A minimum of 5 years relevant working experience in electromagnetic engineering.
- A completed Higher Vocational Education in electrical engineering or electrical machines.
- A deep interest and experience in electric motors.
- Familiar with power calculations, energy or electrical machines.
- Experience in electrical engineering design and / or selection of motor configurations.
- The candidate preferably has experience in a smaller environment (SME or similar situation).
- Feels the responsibility to work as an independent employee, to be successful and to support and encourage colleagues. All this without losing sight of the end result. Quality and service are taken for granted, as well as the awareness that you can only be successful as part of a team.
