

# Ingenieros de estructuras para STATOIL. Diversas localizaciones en Noruega (Inglés). Structural engineers -jacket and topside

## APPLY

Statoil is an international energy company with operations in 35 countries. Building on 40 years of experience from oil and gas production on the Norwegian continental shelf, we are committed to accommodating the world's energy needs in a responsible manner, applying technology and creating innovative business solutions. We are headquartered in Norway with approx. 21,000 employees worldwide, and are listed on the New York and Oslo stock exchanges.

Technology, Projects and Drilling (TPD) aims to provide safe, efficient and cost competitive global well and project delivery, where cost competitive procurement will be an important contributing factor. Corporate wide procurement services will furthermore help drive down costs in the broader organisation. As Statoil's technology centre, the business area aims to ensure commercially focused global technology development and implementation. In addition, the business area will provide line management with global expertise and global standards based on best practice. Moreover, the business area will drive the fast track initiative to move towards the industrialisation of small field development on the Norwegian continental shelf.

We are now hiring structural engineers to take the positions as company representatives, jacket and topside structural discipline leads and technical experts in projects.

New oil and gas discoveries from the Barents Sea to the North Sea and internationally have given the entire oil industry renewed optimism. The position will give you a unique opportunity to work in an inspiring platform technology organization through early phase evaluations and project execution phases with engineering and design, fabrication, installation and follow-up. There will also be possibilities to participate in major modification, life extension and cessation projects and technical operational support.

The project locations are mainly in Stavanger, Bergen, Oslo and Trondheim. Our portfolios include an increasing number of international assignments and some travel and mobility is therefore required.

## **Job description**

- Provide technical expertise to new-build and modification projects
- Drive technology development in co-operation with our suppliers
- Implement new technology in early project phases
- Define scope and follow up contractor studies and deliverables
- Prepare tender packages and evaluate tenders
- Manage project execution, including follow-up and quality surveillance of engineering and offshore installation work
- Ensure compliance with the company's HSE targets through safe and environmentally friendly solutions

## Qualifications

- University degree (BSc/MSc/PhD) or equivalent education
- Minimum seven years of relevant experience, preferable from offshore projects
- In-depth knowledge of jacket and topside structural design and analysis
- Familiar with relevant regulations and standards
